

SUSTAINABLE PROPERTY DEVELOPMENT

As a major landowner and developer in New South Wales, Central Real are well aware of the benefits of incorporating sustainable design principals into our new developments.

Central Real aspires to be an overall positive contributor to our communities, people and the environment. We aim to work in partnership with our customers and suppliers to this end.

Our long-term philosophy includes a sustainable approach to the environment, as well as proper consideration of our social and economic responsibilities to the wider community. Optimising the sustainability potential in new developments through green design initiatives, positions a property well to minimise its environmental impacts and provide long-term benefits for customers and the local community.

AT CENTRAL REAL, WE WORK TO:

- Minimise negative environmental impacts and enhance the local area
- Reduce the energy and water intensity of properties we develop
- Maximise the sustainable use of resources
- Extend durability and functionality

At Central Real we believe that looking after our environment to meet the needs of current and future generations is essential to our ongoing business success. We recognise that we need to continue to discover innovative ways to reduce our environmental impact and work to deliver a greener, healthier community into the future.
